Introduction

Welcome to Project Dashboard This user guide will help you get started with using my web application, and provide you with an overview of the features and functionality available to you. If you have any questions or issues, please don't hesitate to contact me for assistance.

Getting Started

To get started with Project Dashboard, follow these steps:

1. *Open the terminal and locate the directory of the folder.*
2. *When inside of directory, run the command, npm start.*
3. *Once that command has run, a web page should open automatically, if it doesnt, simply open a webbrowser and type in the URL "localhost:3000"*
4. *Once the webpage loads, you will be greeted with a login page, enter in the details provided to you and hit the login button.*
5. *Once in the webpage you should be able to see the metrics and figures on the graphs, enjoy!*

Features

Tooltip Information: *Hover over any line on a graph to view the tooltip, itll display the data at the*

current time value of your cursor.

Navigation Bar: Use the navigation bar based at the top of the main window to switch between full and individual graph modes, this allows you to view trends of metrics better.

Date and Time: View the top left of the webpage to see your current local date and time, this will be useful for implementation if the application is maximised.

Connection Status: View the top left of the screen to see the connection status of your interface and back end service.

Logout Button: View the top right of the screen to see the logout button which will log out the current user from the panel.

For more detailed information about each feature, please [contact me](#).

Troubleshooting

If you encounter any issues while using Project Dashboard, please follow these steps:

Step 1: Attempt to come off and on the webpage.

Step 2: Attempt to reload the webpage.

Step 3: Close down the webpage using npm, and restart the webpage through the terminal.

If you're still having issues after following these steps, please [contact me](#) for assistance.
